

ROOTSUPPORT

Improves healthy root growth

RootFit+

Contains various mycorrhizal fungi for an improved resilience and uptake of nutrients and water.

Discover RootFit+: an advanced soil improver developed for professional agriculture, enriched with both endomycorrhizal and ectomycorrhizal species. RootFit+ expands the root zone, improves plant resilience during abiotic stress, and buffers nutrients to make them available to plants. Optimize soil with RootFit+ for a practical approach to sustainable agriculture and enhancing crop resilience.

Root-improver, formerly known as Injectable Universal 2.0

Powder

Soil

Organic

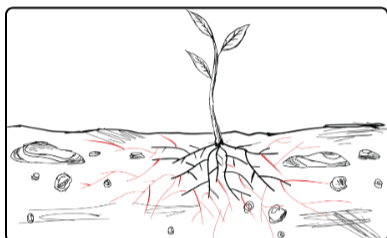

Optimize Rootzone

"This product seems to be effective in reducing inbirth "

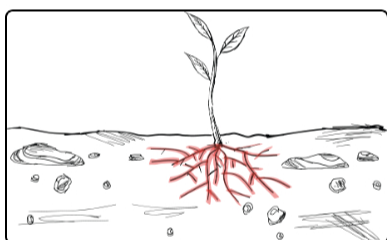

Gerben van den Akker – Sugar beet farm
– Nederland

Advantages

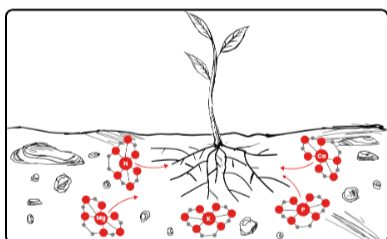

Expands root zone

Due to the mycorrhiza colonisation the rootzone can expand up to 700%.

Improves plant resilience during abiotic stress

Microorganisms improve water and nutrient uptake leading to less abiotic stress such as drought.

Buffers nutrients and makes it plant available

The nutrients will be buffered in the soil due to humic accids. Fulvic transports the nutrients to the plant.

Packages

Box

10 bags x 200 g

Precautions safe handling and storage*

2 years minimum, must be stored in a dry, frost-free place, away from direct sunlight

Dosage

Recommended quantities at a minimum of 600 gr per hectare. Look for specific cultivation advice on the website.
